

# Silicon Repair Tape

SUPER-POWERFUL SELFVULCANISING TAPE

- ✓ Pressure resistant to 15 bar.
- ✓ Heat resistant up to 260°C.
- ✓ Insulating up to 8000 Volts.
- ✓ Permanently airtight and liquid-proof.
- ✓ Instant vulcanisation – even under water.
- ✓ Leaves behind no glue remains.

## Technical Info

- Thickness: 0,5 mm.
- Width: 25 mm.
- Length: 3 m.
- Pressure resistance: up to 15 bar.
- Temperature resistance: -65°C to 260°C.
- Elasticity: 300%.
- Shelf life: 24 months, keep dry, cool and frost-proof.

## Packing

Silicon Repair Tape black - roll 25mm / 3m	565525000
Silicon Repair Tape transparent - roll 25mm / 3m	565515000

## Product [SRT]

### Characteristics

- A silicone tape that meets the highest specifications and can be used as insulation, sealing or repair tape under varying conditions.
- Can be applied in poor conditions, where preparation is difficult, because it bonds by itself. The surface therefore does not necessarily have to be cleaned and dried.
- Remains flexible and resists petroleum (gasoline), oil, acids, solvents, salt water, road salt and UV light. Available in black or transparent, depending on application.

### Applications

- By stretching the tape and tightly (halfoverlapping) wrapping it on top of itself, a permanent bond forms almost immediately.
- Silicon Repair Tape is ideally suited for: repairing leaking hoses, sealing pipes and fittings, insulating electrical wires, corrosion protection, sealing connectors and fittings, protecting rigging and rope ends, marking lines and chains, giving anti-slip qualities to handles and tools,...

## Use

It is possible to create a permanent bond almost immediately by stretching the tape and wrapping it tightly (half-overlapping) around itself.
