Product [NC2]

Characteristics

Novacare NC2 is specially designed for flawless, new paint and for use after Novacare NC1. Novacare NC2 is silicone-free and can be used on any cured paints. Novacare NC2 can be easily applied by hand. Easy to smear on the surface and smooth down. If necessary, first use abrasive polish Novacare NC0 and/or level with NC1.

Use

- Apply evenly on a clean and dry surface using a Novawipe Microfibre wipe.
- Allow Novacare NC2 to penetrate for a few minutes and wipe off with a Novawipe Microfibre wipe.
- It's easy to remove any product residues with the same wipe.

Novacare NC2 gets rid of traces and rings. Use only dry and clean tools, without traces of other products, to ensure a perfect result.

Ideally, contact with water should be avoided between 48 and 72 hours following the treatment in order not to impact the polymerisation of the top layer.
