## Product [NBT]

### Characteristics

Nova-Boot is the newest universal cardan sleeve, manufactured from the highest quality neoprene. Nova-Boot is completely adapted to the most difficult cardan types.

## Use

- Inject the Nova-Boot assembly cone with Nova-Boot Lube and place it on the ground.
- Press the arms of the Nova-Boot assembly together and shove the broad end of the Nova-Boot over the 2 clamping brackets. Important: before assembling a sleeve on a coupling on the gearbox, read the instructions at the end.
- Press in the small upper end of Nova-Boot and inject this abundantly with Nova-Boot Lube.
- Turn the assembly tools with Nova-Boot around and place this centrally on the assembly cone.
- Push the assembly tool with the boot in an uninterrupted and powerful movement downwards.
- Slide the entire unit over the cardan head and press the sleeve into its position.
- Give a brief tap on the base of the assembly equipment to remove the cone and equipment.
- Apply the associated grease to the coupling and put the boot in its position
- Fasten the sleeve with the tensioning bands.
